

Machinery Training

RIIMPO318F Conduct civil construction skid steer loader operations

RIIMPO320F Conduct civil construction excavator operations

Start training for a career in the construction and earthmoving industry!

At Shift our class numbers are small to enable you to gain the necessary skills and plenty of practical experience to bring you up to industry standards for the safe operation of the excavator and/or skid steer loader – we provide plenty of machine time so you'll feel confident operating the machines with ease.

Our machinery course is competency based training and assessment where you can complete both the formal and informal requirements at Shift Training's facility or on your site.

You'll learn a wide range of skills and knowledge including WH&S guidelines, planning and preparation for works, operating the machines safely, lifting, carrying and placing materials, selecting, removing and fitting attachments, relocating the machines, basic maintenance and shutdown procedures.

Following successful completion of the assessment requirements students will receive a Statement of Attainment.

Choose to do one or both machines – the choice is yours.
